

FRONT DISC BRAKE

- For the brake calipers, the 4-piston opposed type made of aluminum has been adopted, and the rotors are the large ventilated type.
- The shape of the disc brake dust cover has been optimized for the cooling performance of the brakes.
- The installed position of the brake pads has been optimized to enable the pads to wear evenly.
- An electric type pad wear indicator has been provided on the right disc brake caliper to inform the driver when the pads must be replaced, via the multi-information display of the combination meter.

Brake Pad Offset and Installation

REAR DISC BRAKE

- For the brake calipers, calipers made of aluminum have been adopted, and the disc rotors are the large ventilated type.
- As in the front brakes, an electric type pad wear indicator has been provided on the right disc brake caliper.
