

REAR DESIGN

- ① The classy design.
- ② In the rear combination lights, the individual inner lenses are surrounded by chrome frames. In addition, the outer lenses and the aluminum center garnish are chamfered to project the quality and luxury that is suitable for a vehicle of this stature.
- ③ A wide trunk top surface and horizontal combination lights that match the horizontal-theme underbody are provided to express quality and uniqueness.
- ④ Similar to the front bumper, the rear bumper has also adopted an upper and lower 2-piece construction.

MO

SALES POINT

Rear fog lights are provided as standard equipment on all models to improve their visibility to the vehicles being driven behind in unfavorable weather such as rain or fog.
